### PART – G

#### IMPACT OF THE POLLUTION CONTROL MEASURES ON CONSERVATION OF NATURAL RESOURCES AND CONSEQUENTLY ON THE COST OF PRODUCTION

M/s Shree Cement Limited is being operated on dry process technology, which is cost effective and environmentally clean technology. The advantage of dry process is also in fuel economy. The stack emissions from the plant are controlled by equipment like ESPs, Bag Houses and Bag Filters installed at various material transfer points to

clean the process and arrest the fugitive emissions. The particulate matter collected in the pollution control equipment is recycled in process and neutralizing the cost of operation of pollution control equipments and hence no cost impact on the production cost.

Synthetic Gypsum is being used in place of natural gypsum thus directly conserves the mineral gypsum. Waste Heat Recovery System (WHRS) is installed at Pre- heater and cooler section for trapping of high temperatures gases and are used for generation of Green Power which as resulted in conservation of fuel, reduction of GHG emissions and water conservation.

#### PART – H

#### ADDITIONAL MEASURES / INVESTMENTS PROPOSAL FOR ENVIRONMENT PROTECTION INCLUDING ABATEMENT OF POLLUTION

Green belt development and tree plantation is our ongoing process. Plantation has been carried out in an area of around 63.8 hectare with (Total land: 187.56 hc.)165311 trees, which is ~34 % of the total land of plant area.

#### PART – I

#### ANY OTHER PARTICULATES FOR IMPROVING THE QUALITY OF ENVIRONMENT.

1. We have full-fledged Environment Department with three separate cells, for monitoring, maintenance of pollution control equipment and Green Belt development.
2. Monitoring of stack emission and ambient air and water quality is being done regularly.
3. Maintenance department is doing regular checking and scheduled maintenance of all the pollution control devices.
4. Civil dept. taking care of Housekeeping.
5. Horticulture Department is taking care of tree plantation and green belt development. Every year we are doing tree plantation.
6. Conversion of ESP to Bag House has being done in Raw Mill and Kiln stack.
7. Upgraded cooler ESP transformer and control panel in first field to further reduce PM emission levels.
8. Constructed concreted roads at Stacker and Reclaimer area for further reduction of fugitive emissions.
9. Installed new bag filters at various application like DBC, transfer points etc.
10. Modification of Coal Mill Bag House for further reduction of Particulate emissions.
